Summary

Passionate and results-driven Python AI Developer with experience in developing intelligent systems using machine learning and computer vision. Skilled in building AI solutions like face recognition, emotion detection, and multilingual chatbots, with expertise in Python, OpenAI, and Microsoft Azure. Proficient in backend development with Python Django and frontend technologies like HTML, CSS, and ReactJS. Experienced in frameworks such as TensorFlow, PyTorch, and Scikit-learn. Adept at designing user-friendly interfaces with Python Tkinter to enhance user experience and streamline recruitment and customer support processes.

Skills

Core Development Tools: Python, Tensorflow, PyTorch, Numpy, Pandas, Scikit-learn, OpenCV

Artificial Intelligence & Machine Learning: Computer Vision, Machine Learning Algorithms

Frontend Frameworks & Tools: HTML, CSS, Bootstrap, ReactJS

Backend Development: Python Django

Programming & Scripting: Python, C, C++, JavaScript

Database Technologies: MySQL, SQLite

Professional Experience

Python AI Developer Intern

Falcon IT Consulting, Lahore, PK | Oct 2024 – Jan 2024

- Developed advanced face detection, recognition, and multi-face detection systems leveraging **FaceNet** and **MediaPipe**, ensuring high accuracy and real-time performance.
 - Built intelligent voice cloning systems using **TTS** and multilingual chatbots using **OpenAI**, enhancing user interaction and accessibility.
 - Developed AI solutions for a call center project using **Microsoft Azure**, automating customer support workflows and improving service efficiency.
 - Created HR-specific AI solutions to streamline recruitment processes, automate candidate screening, and improve decision-making efficiency.
 - Designed user-friendly graphical interfaces for AI applications using **Python Tkinter**, enabling seamless interaction with backend AI functionalities.
-

Projects

ResumEase: AI Powered HR Assistant (resumease.co)

- Developed responsive, user-friendly web applications using HTML, CSS, Bootstrap, JavaScript, Python, Django, AI, and SQLite3.
- Automated HR processes for shortlisting candidates and scheduling interviews, while providing resume-builder, job portal, and interview preparation blogs features.
- Enabled users to receive quick responses on shortlisting, interview dates, and preparation tips, enhancing the overall recruitment experience.

Face Recognition and Emotion Detection

- Developed an advanced face recognition and emotion detection system using **machine learning** and **computer vision** technologies.

Scheduling meetings Chatbot

- Designed and developed a chatbot to automate meeting/interview scheduling, enhancing user experience and reducing manual scheduling effort.
- Integrated **OpenAI's** API for intelligent, conversational interactions to efficiently handle scheduling tasks.
- Used **Python** and **Tkinter** to create a simple, user-friendly interface for seamless interaction and scheduling.

Call Center AI

- Developed an AI-powered call center solution that utilizes **OpenAI's API** for natural language understanding, improving customer interaction and satisfaction.
- Integrated **Microsoft Azure services** to automate workflows, enabling efficient handling of customer inquiries, reducing response times, and enhancing service quality.

Pose Detection

- Designed and implemented a real-time pose detection system using **machine learning** and **computer vision**, capable of identifying human body movements with high accuracy.

T-shirt Size Calculation

- Developed a system that uses live video feeds to automatically detect body measurements and suggest the correct t-shirt size based on real-time video input.
- Combined **computer vision** and **AI technologies** to create a seamless shopping experience, enabling customers to determine their ideal t-shirt size without needing to try on clothes.

Education

Bachelor of Information Engineering Technology

Superior University, Lahore, PK | 2021 – 2025
